

### Missing Dipstick Data

This document reports the missing data records in the ancillary dipstick files. Missing data in the dipstick files are reported in the following format: date, hour (count beginning at midnight on December 31, 1993), station (distance in feet from the northwestern end of the transect), and nominal piezometer depth. Empty cells representing missing data were all filled with a common missing data marker “.” in the final published data files.
