

Dipstick Data

The ancillary DIPSTICK files record the history of dipstick readings taken from piezometers along transects B, C, and D. These are manual readings of the depths to water below piezometer rims taken intermittently between 1995 and 2000. The data are recorded in the following format: date (m/d/yyyy), hours since beginning of 1994, station location (in feet from northwest end of transect), nominal piezometer depth in feet, and depth to water level below piezometer rim (cm). For additional methodology information, see section 2.5.1.3 of the Metadata document.
